

EFFICIENT TOOL

Unicontrol3D is an efficient tool for all operators. With precise results, detailed documentation, and savings on surveyors' usage, the system adds value to everyone.

EASY TO USE

The Unicontrol system is fast and easy to set up, and just as easy to use. You will be saving time and money straight away.

INDEPENDENT OPERATOR

The need for surveyors is minimized, and the operator can see the designs for the job, making it easy to get the job done while receiving data for quality assurance.

QUALITY ASSURANCE

Documentation and quality assurance is done with ease, with the precisely measured data transferred between the workstation and the wheel loader. The work is documented constantly.

NO REPETITIONS

With precise measurements and designs, no unnecessary repetitions, the job is done with accuracy and ease the first time!

ABOUT UNICONTROL

Unicontrol3D is a user-friendly 3D machine control system designed for all types of wheel loaders.

Our main task is to make the job easier for the machine operator – this is why we've developed a simple and user-friendly system that does not require any technical knowledge.

Visit our homepage or call us for more information.
