FARMER'S CHOICE

Work on the farm never stops, so you need a machine which delivers non-stop performance too. Working day or night, indoors or outdoors, the Volvo wheeled loader will fit seamlessly into your operation, carrying a variety of loads across some of the most challenging ground conditions.

The perfect package

Specialised tasks require specialised equipment, which is why Volvo Construction Equipment offers wheeled loaders configured to meet the unique requirements of a wide range of applications. Application specific wheeled loaders are designed and built to ensure you achieve superior results according to the unique demands of the segment you are working in. The right machine options, tyres and attachments all combine to ensure Volvo's specially adapted wheel loaders deliver maximum safety and performance. As with all Volvo products you can trust in the full support and back-up from SMT GB, for the lifetime of your machine.

Do it all

The third hydraulic function enables the use of hydraulic attachments, giving added versatility to your machine, while the attachment bracket enables switching between attachments in seconds. The Torque-Parallel linkage system provides high break out, tilt-in and lifting forces, and the parallel movement contributes to greater load stability. Fast travel speed allows the machine to navigate the farm efficiently.

Primed for comfort

Keep it comfortable thanks to the easy access/exit and well-ventilated Volvo cab, with excellent all-around visibility. Smart functions, such as the Boom Suspension System, ensure a comfortable ride when the machine is at work and on the move. The result is reduced fatigue and a more productive operator for the entire work shift.

Built-in operability

Take on tight turns, narrow lanes and soft underground conditions with ease in the highly maneuverable Volvo Wheeled Loader. A host of features including compact design, optimized machine weight, agriculture tyres, perfectly matched engine power, high dump height and high rimpull ensure the machine delivers maximum productivity in agricultural operations.

Easy servicing

The Volvo agriculture wheeled loader is designed to keep uptime to a maximum. The automatically reversible radiator fan allows for self-cleaning of the cooling units, and the slide-out cooler installation enables further speed of cleaning.

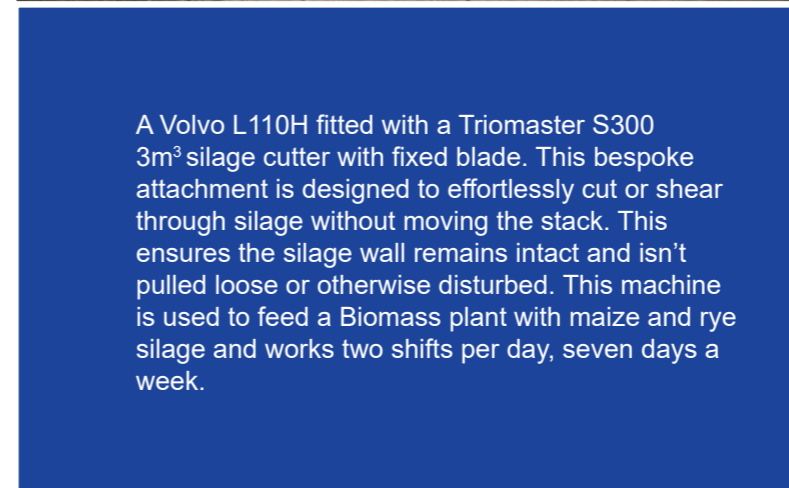

L25 Electric Wheeled Loader

Volvo recognise that a sustainable business is a successful business, and are delighted to introduce the Volvo L25 Electric - the first in a new range of electric compact wheel loaders. The Volvo L25 Electric combines the proven Volvo compact wheel loader platform with battery power, providing all the performance you need along with zero emissions and an incredibly low noise level generated. Helping to keep your operations running smoothly, while creating a safer, cleaner and more peaceful setting for people, crops, animals and the wider environment.

THE ALL-ROUNDER FOR AGRICULTURE

This highly specified L110H was chosen for its fuel efficiency, productivity and reliability. It features a 7m³ high-tip bucket capable of loading 100 tonnes of material into their anaerobic digester per day. The machine can easily change to a hydraulically folding grass fork for handling silage and also features 750/65 Michelin XBIB agricultural wheel and tyre assemblies which will enable the machine to work on the company's farm lands when needed.

A Volvo L110H fitted with a Triomaster S300 3m³ silage cutter with fixed blade. This bespoke attachment is designed to effortlessly cut or shear through silage without moving the stack. This ensures the silage wall remains intact and isn't pulled loose or otherwise disturbed. This machine is used to feed a Biomass plant with maize and rye silage and works two shifts per day, seven days a week.

This Volvo L70H, fitted with a hydraulically folding silage fork, can ramp up and push as much as 14 tonnes at a time building silage clamps. When used on grain handling duties it fills a 6m³ bucket with around 4 tonnes per load with ease. The machine is fitted with Michelin 750/65 Mega XBib wheel and tyre assemblies, additional work lights & has a reversible fan for working in the grain sheds.

Single lever control and Comfort Drive Control (CDC) were the deciding factors for choosing this Volvo L70H. CDC is used for working in tight spaces with the steering wheel only being used when driving on the road. Boom suspension makes for smooth driving on the roads and the load-over-height is perfect for loading manure into high-sided bulkers. This L70H also works on silage clamps and loads trailers with straw bales using a bespoke bale clamp.
